There is no other method for laying underfloor heating that is simpler or safer. With the **FLOORTEC Studded system UNI**, it takes only four working steps to assemble the system – without the need to use any tools during the installation.

The support on which the pipes are laid is equipped with foam studs that hold the pipes in place. The heating pipe can be pressed into these studs with ease using your foot. Thanks to the **FLOORTEC Studded system UNI**, laying underfloor heating has never been easier.

FLOORTEC Studded panel UNI 35-2.

Advantage:

The system is shown with a precise layout with a 50 mm grid pattern, whereby optimal heat distribution is guaranteed, in accordance with the physical calculations.
