The **FLOORTEC Rail-mounted system** impresses thanks to its easy handling, due to the fact that it consists of elements measuring 1 m in length, which can be expanded “endlessly” using the “click” system. The mounting rails are fixed to the ground over the covering sheet using retention pins.

FLOORTEC mounting rails with retention pin.

Advantage:

The **FLOORTEC Rail-mounted system** can be used regardless of the design of the insulation located underneath and is perfectly suited to large surfaces and heavy loads. The pattern with 50 mm gaps can be used with all pipes measuring 14, 16, 17 and 20 mm.
