

## SECO & SECO-PLUS.

Melba Levick/arcaid

The **Seco** and **Seco-Plus** shaft systems fulfil the technical requirements for fire protection in buildings (L30 or L90). The small design of the **Seco-Plus** is particularly advantageous for condensing boilers. The larger **Seco** system fulfils all requirements with the approved **Unitec** internal pipe.

**Advantage:**  
**Seco-Plus** and **Seco** offer first-class fire protection (L30- or L90 for fire protection shafts) with small installation dimensions.

Seco
