

## LASA.

**Lasa** is a concentric gas flue system for condensing boilers with a positive pressure operating mode that functions independently of the ambient air. The system is quick and easy to use thanks to the accuracy of fit, the low weight of the ready-made components and the special wall attachments for exterior facades. The system saves space and is light-weight; the stainless steel outer casing is weather resistant.

**Advantage:**

**Lasa** can be combined with other concentric systems for connecting pipes.
